### Attention:

- The complete set must including 2 set of ACB, cable interlock ,220VAC motor/shunt release /closing coil / ATS Controller
- Do not install key lock with ACB, it will damaged the ACB when automatic transfer
- Do not install the under voltage release with ACB, It will impact ATS automatic transfer
- Do not use ACB's MODBUS or remote signal to Switch ON/OFF breaker by MX/XF, It will impact the ATS automatic transfer
- Please refer to HDW3 air circuit breaker's user manual before installed ACB
- Please refer to HDW3 cable mechanical interlock 's user manual before assemble with ACB
- Default with 2m controller cable

# 1. Product Introduction

**ATSE2C automatic transfer controller** is an intelligent ATSE controller with programmable functions, automatic measuring, LCD menu display, and digital communication. It can automatically realize voltage, frequency, phase etc. electrical parameters measurement and automatic control according to setting strategy which can reduce human operation error. It is an ideal product of ATSE.

**ATSE2C automatic transfer controller** consists of microprocessor as core. It can precisely detect two-source 3-phase voltage and make precise recognition about abnormal voltage (over-voltage, under-voltage, loss phase, over - frequency, under - frequency) and output passive control digital. This device can be widely applied to electrical devices, automatic control and debug system in industry of power, post and telecommunications, petroleum, coal, metallurgical, railway, municipal, intelligent building etc.

## Functional parameter

- Graphic LCD128x64 pixel;
- Two-source AC power input, 3-phase 4-wire;
- Measured values, settings, and message texts are supported in English and Chinese
- 10~30VDC power supply.
- Detection function for over-voltage, under-voltage, phase loss, reverse phase sequence, over-frequency, under-frequency;
- 8-channel programmable digital input (grounding effective);
- 10-channel programmable digital output;
- Integrated RS-485 isolation interface, MODBUS protocol;
- Storage of last 200 events;
- Real time clock
- All parameters are field programmable, use password access to avoid mis-operation by unprofessional persons;
- The fixed washer is IP65 degree of protection
- Module structure design, Retardant PC cover, pluggable terminal, embedded installation mode, compact structure and easy installation;

## 2. Front panel touch button function

Icon	Button name	Function description
	Position 1	In Manual mode, press this button to transfer load to position 1
	Position 2	In Manual mode, press this button to transfer load to position 2
	Position 0	In Manual mode, press this button to transfer load to position 0
	Test mode	Press this button for 3 seconds to enter test function.
	Auto mode	Press this button for 3 seconds to set controller as Auto mode.
	Manual mode	Press this button for 3seconds to set controller as manual mode.
	Programming mode	Press this button for 3 seconds to set controller as programming mode.
	Increase/ up	In menu page, press this button to scroll page. In parameter setting page. Press this key to up cursor or increase value.
	Decrease / down	In menu page, press this button to scroll page. In parameter setting page. Press this key to down cursor or decrease value..
	Enter	Press this button to enter sub-menu or confirm setting information.
	Return	Press this button to return prior menu screen, press this button for 3seconds to lock/unlock the button. Press it can clear fault alarm when alarm occur.

## 3. Front panel LED

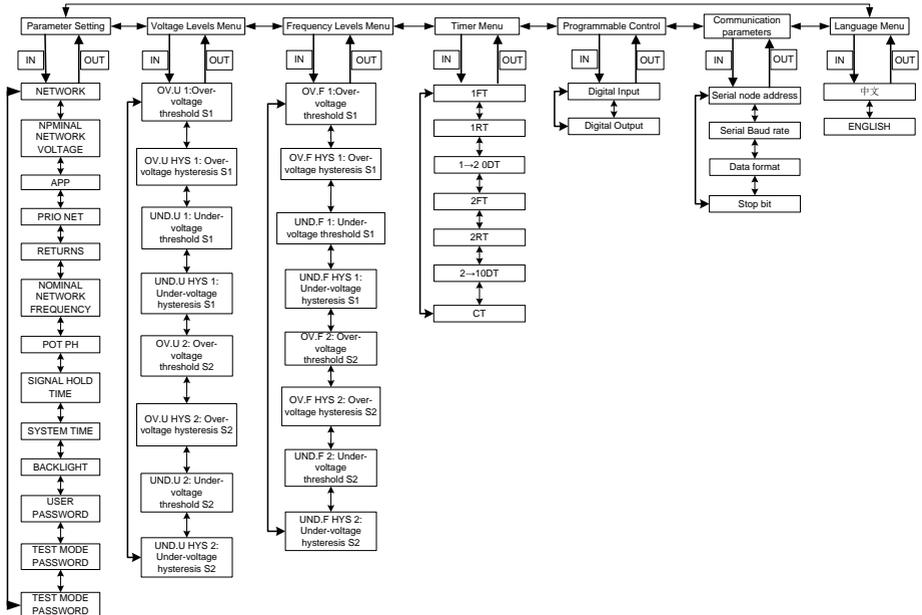

- Alarm LED (Red) –when fixed, indicates an alarm is active;
- S1 voltage status LED (Green) –S1 normal, fixed; S1 abnormal, blinking;
- S2 voltage status LED (Green) –S2 normal, fixed; S2 abnormal, blinking;
- Position 1 status LED (Green) –on, POS1 close; off, POS1open;
- Position 2 status LED (Green) –on, POS2 close; off, POS2 open;

## 4. Working mode

- Programming mode: parameter setting operation under this mode, long pressing “programming mode” button for 3s to enter. All measuring values and status LED display keep activated. Set as programming mode before visiting programming menu.
- Manual mode: can control switch manually, long pressing “manual mode” button for 3s to enter. Pressing I close and II close can change the switch position. Pressing 0 can open the two sources.
- Automatic mode: long pressing “automatic mode” button for 3s to enter. Under automatic mode, device automatically executes operation of open/close switch and start/stop generator. When the time of exceeding limit of prior source is longer than the set delay time, the device will open the load of the main source and connect to the emergency source.

## 5. Main menu

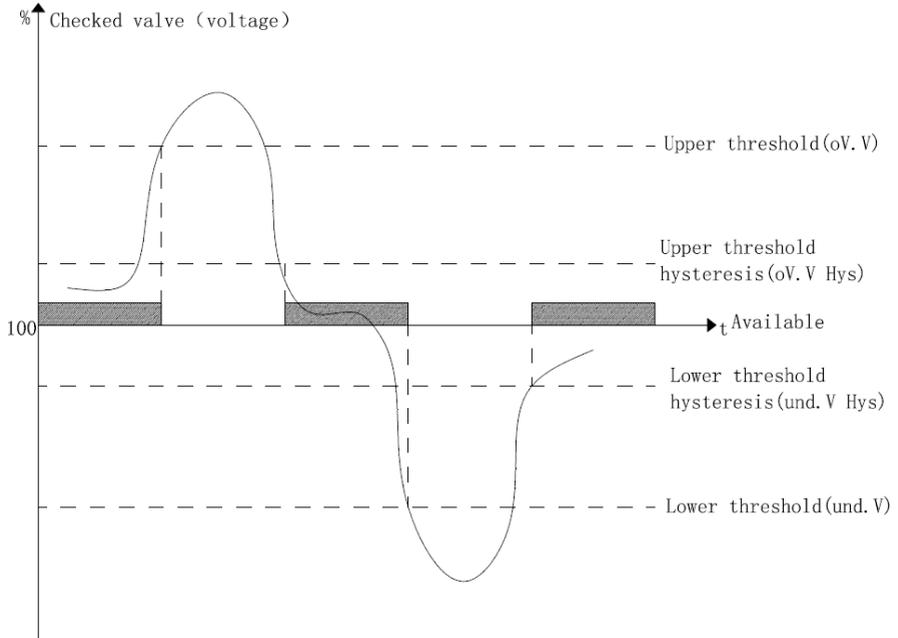

- Main menu consists of parameter setting, Voltage Levels Menu, Frequency Levels Menu, Timer Menu, Programmable Control, communication parameters and Language Menu to make it convenient for user to fast visit measuring value and revise parameters.
- Parameter setting: this operation is only valid under the programming mode. When there are changes of parameter, it will show “save parameter?” before returning to main menu. Select “YES” to save parameters. For parameter setting please refer as below.

## 5.1、Parameter Setting

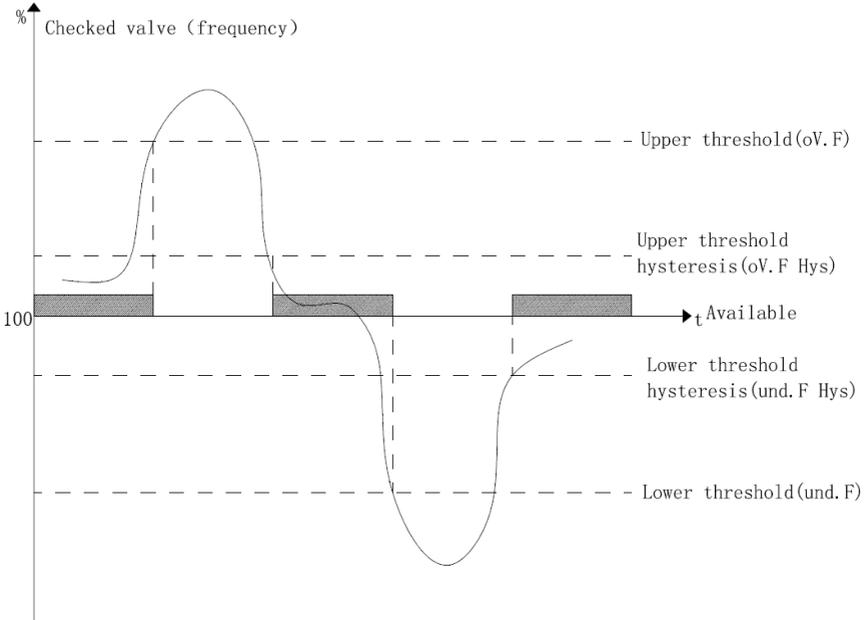

No.	Option	Definition	Default	Adjustment Range
1.1	NETWORK	Network Type	4NBL	4NBL
1.2	NOM.VOLT.	P-P Voltage	400	50-690V
1.3	APP	M-M:Mains to Mains Supply M-G:Mains to Generator Supply G-M:Generator to Mains Supply	M-M	M-M/M-G/G-M
1.4	PRIO NET	Choose S1 or S2 for Priority Net	S1	S1/S2
1.5	RETURNS	Inhibit the automatic retransfer	Automatic retransfer to the priority source	Automatic retransfer to the priority source/ Don't automatic retransfer to the priority source/ Backup
1.6	NOM.FREQ.	Nominal network frequency	50 Hz	50/60Hz
1.7	POT PH.	Select and verify Phase Sequence	OFF	L1L2L3/ L3L2L1/ OFF
1.8	SIGNAL HOLD TIME	Pulse time of the opening and closing relay output	5.0S	0.1-20.0S
1.9	SYSTEM TIME	\	\	Real time
1.10	BACKLIGHT	Min	Active	Active /1-30Min
1.11	USER PASSWORD	\	0101	0000-9999
1.12	TEST MODE PASSWORD	\	0021	0000-9999
1.13	FACTORY SET	Set parameter to factory default	yes	Yes/no

## 5.2、Voltage Levels Menu:

No.	Option	Definition	Adjustment Range
2.1	<b>OV.U 1:</b> Over-voltage threshold S1	115%	102-130%
2.2	<b>OV.U HYS 1:</b> Over-voltage hysteresis S1	110%	101-129%
2.3	<b>UND.U 1:</b> Under-voltage threshold S1	85%	70-98%%
2.4	<b>UND.U HYS 1:</b> Under-voltage hysteresis S1	95%	71-99%
2.5	<b>OV.U 2:</b> Over-voltage threshold S2	115%	102-130%
2.6	<b>OV.U HYS 2:</b> Over-voltage hysteresis S2	110%	101-129%
2.7	<b>UND.U 2:</b> Under-voltage threshold S2	85%	70-98%
2.8	<b>UND.U HYS 2:</b> Under-voltage hysteresis S2	95%	71-99%

### 5.3、Frequency Levels Menu:

No.	Option	Definition	Adjustment Range
3.1	<b>OV.F 1:</b> Over-voltage threshold S1	<b>OFF</b>	<b>OFF/</b> 102-120%
3.2	<b>OV.F HYS 1:</b> Over-voltage hysteresis S1	103%	<b>101-</b> 119%
3.3	<b>UND.F 1:</b> Under-voltage threshold S1	<b>OFF</b>	80- <b>98%</b>
3.4	<b>UND.F HYS 1:</b> Under-voltage hysteresis S1	97%	88- <b>99%</b>
3.5	<b>OV.F 2:</b> Over-voltage threshold S2	<b>OFF</b>	<b>OFF/</b> 102-120%
3.6	<b>OV.F HYS 2:</b> Over-voltage hysteresis S2	103%	<b>101-</b> 119%
3.7	<b>UND.F 2:</b> Under-voltage threshold S2	<b>OFF</b>	80- <b>98%</b>
3.8	<b>UND.F HYS 2:</b> Under-voltage hysteresis S2	97%	88- <b>99%</b>

## 5.4、Timer Menu:

No.	Option	Definition	Default	Adjustment Range
4.1	1FT	Source 1 Failure Timer	5S	0-60S
4.2	1RT	Source 1 Return Timer	2Min	0-60Min
4.3	1→2 ODT	Source 1 to Source 2 dead time in 0 position	5S	2-20S
4.4	2FT	Source 2 Failure Timer	5S	0-60S
4.5	2RT	Source 2 Return Timer	2.0 Min	0-60.0Min
4.6	2→1 ODT	Source 2 to Source 1 dead time in 0 position	5S	2-20S
4.7	CT	Generator cool down Timer	5Min	0-60Min

## 5.5、Programmable Control:

No.	Option	Default	Adjustment Range
5.1	Digital Input		1-5
5.1.x.1	Input function		
5.1.x.2	Contact Type	NO	NO/NC
5.1.x.3	Input delay	0.05S	0.01-600.00S
5.2	Digital Output		6-10
5.2.x.1	Output function		
5.2.x.2	Contact Type	NO	NO/NC

## INPUT MENU

Input Menu	Input code definition
Inhibit	Inhibit input function
Forced to pos. 0	The transfer switch is immediately driven to 0 position, and the controller in manu mode, meantime when the input signal disappear, the controller feedback to auto mode
Priority	Priority network select; change S1 or S2 priority state when input is activated, return to current priority state when input is not activated
Remote control	Remote control is enable when input is activated
Remote position 1	Switch transfer to position 1 when input is activated
Remote position 2	Switch transfer to position 2 when input is activated
Remote position 0	Switch transfer to position 0 when input is activated
Test off load	Activates on an off load test, this will start/stop the generator without transferring the load to S2

## Parameter Setting

Test on load	Activates on an on load test, this will start/stop the generator with transferring the load to S2
LS	Verify the generator don't overload before transfer to S2

## OUTPUT MENU

Output Menu	Output code definition
Inhibit	Inhibit output function
ATS ready	The output signal is activated when switch and controller are OK
S1 available	The output signal is activated when S1 available
S2 available	The output signal is activated when S2 available
Alarm	The output signal is activated when controller failure
Manu mode	The output signal is activated when controller in manu mode
Auto mode	The output signal is activated when controller in auto mode
Test mode	The output signal is activated when controller in auto mode
Position 1	The output signal is activated when ATS in position 1
Position 2	The output signal is activated when ATS in position 2
Position 0	The output signal is activated when ATS in position 0
Forced to pos. 0	The output signal is activated when ATS forced to 0 position
LS	Verify the generator don't overload before transfer to S2
ATS Source N	Auxiliary Source N
ATS Source L	Auxiliary Source L
Start generator	When APP is M-G/G-M, the mains source failure, the output signal is activated
Universal	The Communication control

## 5.6. Communication parameters

No.	Option	Unit	Default value	Range
5.1	Serial node address	\	3	001-254
5.2	Serial Baud rate	\	19200	2400/4800/9600/19200/38400
5.3	Data format	\	8N	8N/8O/8E/7O/7E
5.4	Stop bit	\	1	1/2

Note: Data format '8N' means 8 data bits, 'N' means no parity, '8O' means 8 data bits, 'O' means odd parity, '8E' means 8 data bits, 'E' means even parity.

'7N' means 7 data bits, 'N' means no parity, '7O' means 7 data bits, 'O' means odd parity.'7E' means 8 data bits, 'E' means even parity.

### 5.7、Language Menu:

No.	Option	Definition	Default value	Range
7.1	Language Menu	\	Chinese	Chinese/English

48	S2-CLOSE	BRK2 close output	output port 10A
49	S1-OPEN	BRK1 open output	output port 10A
50	COM	49 and 51 Common	
51	S1-CLOSE	BRK1 close output	output port 10A

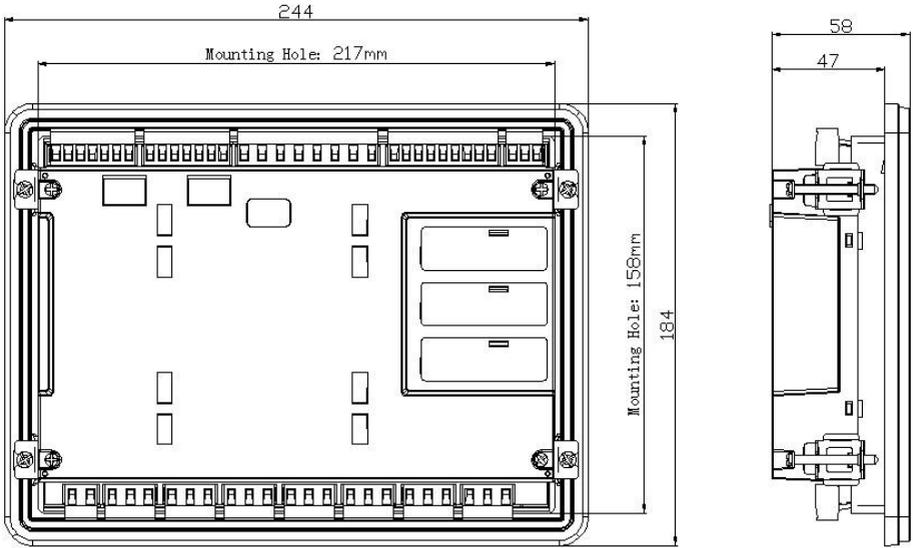

## 6.1 Terminal diagram (ATSE2C controller with air circuit breaker)

## Note

- 1: Default 2m cable
- 2: MX - shunt release 220VAC  
XF - Closing coil 220VAC  
OF3- Auxiliary contact  
AL - Alarm contact
- 3: The ACB must install with cable interlock
- 4: out of dotted line is connect to ACB terminal by customer
- 5: ATS already have under & over voltage protection, do not install undervoltage release into ACB
- 6: Intelligent controller iTR326H, don't use MODBUS control ACB ON/OFF( MX+XF)

## 7. Mechanical dimension and panel opening

## 8. Technical parameters

<b>1、 AC supply: terminal 3,4 and 7,8</b>	
Rated voltage	400VAC(LL)
Operating limit value	90-300VAC(LN)
Frequency	45-65Hz
Power consumption	10W
<b>2、 DC supply: terminal 29,30</b>	
Rated battery voltage	24VDC
Operating limit value	10-30VDC
Max power consumption	10W
<b>3、 Digital input: terminal 17—25</b>	
Input type	negative
Input current	≤8mA
Low input signal	≤2.2V
High input signal	≥3.4V
<b>4、 RS485serial interface: terminal 26,27,28</b>	
Interface Type	isolation
Baud rate	2400-38400bps

Mechanical dimension and panel opening

<b>5、 Output 31-33 (OUT1)、 34-36 (OUT2)、 37-39(OUT3)、 40-42(OUT4)</b>	
Contact Type	single-pole double throw
Rated value	DC: 10A、 30V, AC: 10A、 250V
<b>6、 Output 43(OUT5)、 46 (OUT6)、 48(POSITION O)、 49(POSITION II)、 51(POSITION I)</b>	
Contact Type	single-pole single throw
Rated value	DC: 10A、 30V, AC: 10A、 250V
<b>7、 Working environment condition</b>	
Working temperature	-25℃-70℃
Storage temperature	-30℃-80℃
Relative humidity	20%-93%
Max environmental pollution	Level 3

## Annex A. Alarm code description

Code	Description	Alarm reason
A03	Position1 timeout	No open/close operation of breaker 1 within set time
A04	Position2 timeout	No open/close operation of breaker 2 within set time
A05	Wrong phase sequence of S1	Phase sequence detected by S1 does not meet with the set one
A06	Wrong phase sequence of S2	Phase sequence detected by S2 does not meet with the set one
A01	Not used	Not used
A02	Not used	Not used
A07	Not used	Not used
A08	Not used	Not used
A09	Not used	Not used
A10 ... A17	Not used	

# Annex B: Modbus protocol

Description: *Note1.*

Bit0	Bit1	Bit2	Bit3	Bit4	Bit5	Bit6	Bit7	Status
0	0	0	0	0	0	0	0	Normal
1	0	0	0	0	0	0	0	Missing phase

0	1	0	0	0	0	0	0	Over-voltage
0	0	1	0	0	0	0	0	Under-voltage
0	0	0	1	0	0	0	0	unbalanced phase
0	0	0	0	1	0	0	0	Over-frequency
0	0	0	0	0	1	0	0	Under-frequency
0	0	0	0	0	0	1	0	Phase N loss

Note2: Temperature value uses 4 bytes to show a float data, accords with IEEE-754 standard.

Method to realize: union { float fdata; unsigned char cdata[4];}

Note3: ATSC working mode: range 1-4, 1-PROG, 2-MANU, 3-AUTO, 4-TEST

Note4: Backlight ON time: range1-31, setting 31 is keeping activated (keep lighting)

Note5: Serial baud rate: range 2-6, 2-2400,3-4800,4-9600,5-19200,6-38400

Note6: Serial data format: range1-5, 1-8N,2-8O,3-8E,4-7O,5-7E

Note7: Power system type: range1-4, 1- 3 phase 4 wires , 2-3 phase 3 wires , 3-2 phase 3 wires , 4-1 phase 2 wires

Note8: Power supply type: range 1-4, 1-Mains- Mains , 2- Mains -Genset , 3- Genset - Mains

Note9: Back to main power supply: range 1-3, 1- Automatic transfer not automatic recover , 2- Automatic transfer automatic recover , 3- mutually reserved

Note10: Off position: range 1-3, 1-two off position , 2-one off position , 3-no off position

Note11: Phase sequence detection: range1-3, 1-L1L2L3,2-L3L2L1,3-off

Note12: Programmable input function : 1- Inhibit,2-Forced to 0 position,3-Priority,

4-Remote control,5-Remote position I,6-Remote position II,7-Remote position 0,8-Test off load,9-Test on load,10-LSI

Note13: Programmable output function : 1- Inhibit,2-ATS ready,3-SI available,

4-SII available,5-Alarm,6-Manu mode,7-Test mode,8-Position I,9-Position II,10-Position 0,11-Forced to 0 position,12-LSC,13-ATS Source N,14-ATS Source L,15-Strat generator,16-Universal

Note14: Aux Connetor feedbacks : 1-three feedbacks,2-two feedbacks,3-zero feedback

Note15: Save Parameter:when configuration is done,write this data 1 to save the last parameter.

Note16: The data in order to year(2010~2200),month(1~12),date(1~31),hour(0~23),minute(0~59),second(0~59), the last one data set 1 means to update time.
